[Abstract]

[Object]   This invention makes it possible to quickly and easily register a drawing and related information.

[Means to Solve]   A parent drawing that is created using a drawing creation system (CATIA), accompanying information, and the object part information are given ID information containing the same number and correlated with each other and registered in the conversion server. The ID information given to the accompanying information is the number of the parent drawing to which an ID code indicating that the information is accompanying information is added, and the ID information given to the object part information is the number given to the parent drawing to which an ID code indicating that the information is object part information.

[Selected Drawing] Fig. 1

[Description of Reference Numbers]

1 CATIA(drawing creation system)

2 paper

3 microfilm

12 electronic medium(MO disc)

21 drawing-search database

31 CATIA database (D/B)

32 management information database (D/B)

33 converted-data database (D/B)

34 conversion server

35 registration machine

36 drawing-search database (D/B)

37 Terminal

41 memory unit

51 registration database (D/B)
